FOREWORD.

The importance of a good library for a post-graduate and research institution such as the Calcutta School of Tropical Medicine cannot be overrated. It is not surprising, therefore, that Sir Leonard Rogers made plans for a good reference library when he founded the School. He secured a large number of books and medical journals from the medical section of the Royal Asiatic Society of Bengal, and arranged for their transfer to the School to form the nucleus of the present library. He also presented a large number of important journals and other publications dealing with tropical diseases which he had collected during his long stay in India.

It is gratifying to note that on this foundation during the eighteen years of its existence the School has built up a very comprehensive and up-to-date library, perhaps one of the best in this country. The librarian, Mr. J. N. Sur has been associated with this institution from the very beginning and has taken great interest and trouble in so arranging the library that the books are easily accessible for purposes of reference. He has introduced a system of indexing books, journals and special subjects separately which has made this possible.

There have been considerable additions to the library since the first issue of the catalogue in 1933, and this has necessitated the preparation of a new edition which has entailed a great deal of hard work. Mr. Sur and his staff have undertaken this task zealously, and I take this opportunity of congratulating them and of expressing my appreciation of the admirable manner in which the library has been maintained.

PREFACE.

The Library of the Calcutta School of Tropical Medicine maintains a record of all books, journals, etc., that are received, by means of a card-index system. On account of the increasing use of the library by the medical profession generally and by workers in the School particularly, the need for a printed catalogue was keenly felt, and the first edition was published in 1933. Since that date numerous additions have been made and this has necessitated the bringing out of a second edition. Unlike the first issue the present volume includes reports of various enquiries, administration reports, and district gazetteers. At the end of the catalogue a detailed list of all books, memoirs and the scientific papers published by the members of the staff of the School since its inception has been given. This list will show what a large volume of research work has emanated from the School during the 18 years of its existence.

The catalogue has been divided into six parts. Books have been arranged according to subjects and authors. The periodicals, reports and gazetteers have been arranged according to their geographical distribution. An elaborate index both of periodicals and reports has been prepared and appended to the respective sections. This will allow the finding of any publication with the least possible delay and trouble. I am deeply indebted to my assistants for the valuable help they have rendered in compiling and arranging this catalogue.

J. N. SUB,

Librarian, Calcutta School of Tropical Medicine.
